

Quality & Documentation Package Overview

Public overview of quality and document support for supplier review.

This document summarizes the public quality and documentation support that can be discussed during early supplier evaluation.

1. Public qualification documents

- ISO 9001 quality management certificate and other public certificates where applicable
- Company profile, capability overview and public product communication files
- Documents are subject to latest valid versions and project-specific requirements

2. Inspection and traceability

- Material and component traceability can be discussed according to product type and purchase scope
- Inspection records, dimensional checks and packaging records may be provided based on order requirements
- Special inspection items should be confirmed before quotation or contract review

3. Export and project documents

- Commercial invoice, packing list, certificate of origin and other export documents according to shipment requirement
- Technical drawings, project datasheets or test data may require confirmed technical conditions and review process
- Language and format of documents can be discussed according to customer and project needs

4. Boundary of public information

- Public documents do not replace final technical design, test plan or contractual specification
- Confidential formulas, customer documents, project drawings and non-public operating data are not included in public download files

i Public scope note

Public document for initial communication only. Product configuration, technical proposal and performance discussion depend on confirmed operating conditions, drawings, electrolyte/water data and supply scope.

This document does not include customer names, drawings, commercial terms, coating formulas, Ir/Ta ratios or non-public operating data.
